MYSON LSTS HELP SUPPORT OLDER RESIDENTS

A total of 290 Myson Low Surface Temperature (LST) radiators will help to ensure the safety of residents of Beechwood, May Place, Newcastle-Under-Lyme, a new, purpose built complex of 37 two-bedroom and 28 one-bedroom apartments, offering supported living from The Wrekin Housing Trust's ShireLiving brand.

The Myson LSTs were selected for their competitive price and high quality of manufacture. Robust outer casings prevent the surface temperature from exceeding 43°C and the smooth, rounded-edge design helps to prevent injury in the event of a fall. The casing covers all pipework, and clips securely to the wall for safety, but is easily removed for cleaning and maintenance. TRVs allow the temperature to be easily adjusted to suit individuals' needs.

As well as 65 affordable rented apartments, Beechwood will also have a residents' lounge and coffee bar, onsite community restaurant, laundry room and a guest apartment for friends and relatives.

Hydro Mechanical specified Myson LSTs because they offered good value for money with a robust, curved design that provides warmth for residents with maximum safety. They meet NHS and HSE guidelines for a maximum radiator surface temperature of 43°C. As well as being energy efficient, they are aesthetically pleasing; helping to create a comfortable living space.

Kelly Smith, Product Manager for Myson radiators commented, "LSTs are vital in care settings as they safeguard vulnerable people who need warmth to be delivered without hazards. But it's also important that they are attractive when they play a role in providing long term residential accommodation. Myson offers the UK's narrowest LST at just 420mm, which allows specifiers to plan space well and fit heat emitters around a complex array of medical equipment or in spaces where more furniture is needed and wall space is at a premium."

Beechwood, built by Willmott Partnership Homes Limited (Midlands and North) for The Wrekin Housing Trust, will also provide a 24-hour support team, social and leisure activities for residents and a 'pamper' bathroom.

Myson's comprehensive range of LST radiators allows specifiers to provide warmth while making best use of the available space, while giving all due consideration to the needs of more vulnerable end users in sensitive care applications. Myson LSTs carry a CE mark and a ten-year guarantee and are manufactured to high standards from excellent quality materials to ensure a long and efficient lifespan.
